Location: Cairo, Egypt Languages: Arabic (Native), English (Fluent)

## PROFESSIONAL SUMMARY

---

Technical Support Specialist with 7+ years of client-facing SaaS experience, including 4+ years at Bayzat — currently resolving escalated technical issues across 120+ B2B enterprise accounts after moving into the role from a Configuration & Onboarding background in Jan 2024. Hands-on experience troubleshooting API errors, authentication and access issues, data synchronization failures, and platform configuration problems, using log analysis and internal tooling to identify root cause before engineering escalation. Built and maintain Jira-based ticket automation, N8N workflows for data reconciliation, and Apache Superset queries for backend investigation. Experienced documenting findings, root causes, and resolutions in ticketing systems, and contributing to runbooks and knowledge base articles. Fluent in Arabic and English, comfortable explaining technical concepts to both technical and non-technical audiences. Comfortable working async and across rotational schedules.

## EXPERIENCE

---

### Technical Support Specialist

Jan 2024 – Present

Bayzat — B2B SaaS HR, Payroll & Employee Benefits Platform, Cairo, Egypt

- Own Level 2/3 technical support investigations for 120+ enterprise client accounts, diagnosing API errors, authentication/session issues, and data synchronization failures between the Bayzat platform, Salesforce, and payroll/scheduling systems.
- Analyze backend logs and system behavior via Apache Superset and internal admin tools to identify root causes, reproduce issues, and document clear findings before escalating genuine defects to Engineering — reducing unnecessary escalations.
- Built and maintain a Jira automation workflow to manage ticket status transitions, and a Slack bot enabling teammates to trigger internal workflows directly, improving cross-team escalation handoffs and resolution speed.
- Developed a billing reconciliation pipeline in N8N comparing Salesforce records against live platform data via authenticated REST API calls (session-based Bearer tokens, paginated requests), independently resolving data discrepancies at scale.
- Reproduce reported platform and configuration issues, document clear troubleshooting steps, and escalate genuine product defects to Engineering with structured findings, reducing back-and-forth during handoff.
- Maintain detailed documentation of investigation steps, root causes, and resolutions within the ticketing system; contribute troubleshooting guides and knowledge base articles used across the wider Customer Support team.
- Collaborate daily with Support, Product, and Engineering to resolve escalated cases and recommend longer-term fixes for recurring technical issues, while tracking resolution time and CSAT.

### Senior Configuration & Onboarding Specialist

Nov 2021 – Jan 2024

Bayzat — B2B SaaS HR, Payroll & Employee Benefits Platform, Cairo, Egypt

- Served as primary point of contact for 120+ enterprise client accounts through the full onboarding lifecycle, configuring the platform to client-specific payroll, leave, and scheduling requirements.
- Diagnosed and resolved platform configuration and data migration issues pre- and post-go-live, cutting post-go-live reconfigurations by 50% and reducing average onboarding cycle time by 70% across 400+ completed onboardings.
- Conducted UAT support and root-cause troubleshooting on client-specific configuration issues, working directly with Product and Engineering on genuine platform defects.
- Built early automation workflows (N8N, Microsoft Power Automate) to reduce manual configuration and reconciliation work, laying the groundwork for later technical support tooling.

### Senior Technical Support Specialist

May 2020 – Nov 2021

The Pampered Chef — Consumer SaaS / E-commerce Platform

- Provided Level 1/2 technical support via live chat, handling up to 5 concurrent sessions, troubleshooting account access, order/platform errors, and technical configuration issues.
- Maintained strong CSAT and SLA performance while independently investigating and resolving technical issues without requiring escalation in most cases.
- Documented recurring issues and resolutions to support internal knowledge base and reduce repeat escalations.

### Technical Support Advisor

Mar 2018 – Dec 2019

Vodafone UK — Telecommunications

- Delivered technical troubleshooting support for account access, connectivity, and device/service configuration issues via phone and chat channels.

- Diagnosed technical problems methodically, escalating complex cases with clear documentation when needed.

## TECHNICAL SKILLS

---

Troubleshooting & Diagnostics: API error diagnosis, authentication/access issues, data synchronization failures, platform configuration issues, root cause analysis, log analysis

Tools & Systems: Jira, Salesforce, Apache Superset (SQL-based reporting), REST APIs, webhooks, JSON, N8N, Microsoft Power Automate, Google Drive API integrations

Documentation: Runbooks, knowledge base articles, ticketing system documentation, cross-functional handoff notes

Other: Bilingual technical communication (Arabic/English), 24/7 rotational support experience, AI-assisted workflow design (Claude)

## EDUCATION

---

Bachelor's Degree — Linguistics and Translation (Russian major, Spanish minor)

*Ain Shams University, Cairo — Jun 2021*
